A United Technologies Company

Advisor management software

Safety | **Security** | Certainty

Driving simplicity

A single interface for facility and security management

 **aritech**

One single interface controlling multiple complex systems

Security and facility management has evolved into a complex set of business functions, which all need to be managed with the safety and security of the staff, visitors and physical assets as a priority. Factors driving this complexity are numerous: multiple sites, remote locations, flexible working hours, number of employees and visitors, as well as evolving needs.

Therefore only an integrated management solution is able to cope with this evolution, providing facility and security managers with a clear view and control over these different functions.

Imagine one interface to manage and control, whether on-site or remotely, all of your security needs on various premises, ranging from intrusion and fire detection to access control and video surveillance.

Imagine these different systems interacting thanks to a seamless integration enabling verification of events through video streams, and linking intrusion and fire events with access control to safeguard the safety and security of people.

Advisor management software is providing just this. It allows you to know exactly who is in the building at any given time. Combined with integrated video surveillance, the staff can monitor the building in real-time and thus deliver a safer and more secure environment for all.

Advisor management software: a smart way to drive simplicity

1. An intuitive graphical user interface, able to provide dynamic floor plans

2. Using only one interface for multiple tasks: access control, digital video, intrusion and fire detection.

One uniform way to provide user access rights, regardless of the type of security system.

The ability to register and track visitors in the building or premises contributes to the safety and the security of personnel and building property.

As the system is user-friendly and operated via a single user interface, it is easy to manage all security systems with a minimum of training.

3. Allowing users to create reports on the fly, thanks to advanced reporting capabilities

4. Scalable to multiple sites, multiple languages and multiple users

5. Aimed at an efficient alarm handling

From registering visitors to controlling visits, work at the reception is made easy using Advisor management software. The receptionist can guide visits, provide access to certain locations and monitor by video whenever needed.

If the building should need to be evacuated, based on the floor plan and presence of people in the building, the actions required can be taken immediately.

The whole is more than the sum of its parts

Digital video surveillance

Advisor management software supports a range of TruVision digital video recorders and network video recorders. In addition to the quality, ease of use and reliability of these video products, their integration into Advisor management software allows system operators to have direct access to live and recorded video, providing instant visual verification of events and alarms.

As a result, operators can focus on one interface to monitor their facilities rather than operating multiple separately running systems. This makes your security setup more efficient, responsive and reliable, saving valuable time and money.

Intrusion

Advisor Management software supports Advisor Master and Advisor Advanced control panels. It provides alarm management combined with video to quickly and efficiently resolve any alarm. It is easy to configure for people who require access to restricted areas.

If an intrusion is detected, the alarm is pinpointed on the floor plan and a relevant live video stream can be started automatically while lights and doors can be controlled by pressing one button. The presence of intruders is easily verified by switching to recorded video streams and the log file will keep track of the route followed.

Access control supporting multiple sites

Access Control, based on Advisor Master, provides complete access in multi-site environments where people need access to more than one site.

The Advisor management software allows a specific user to gain access where required using the same or unique ID. All this is possible without having to add the user to each site or ID.

Fire

The Advisor management system supports full integration of the FP1200/FP2000 fire alarm panels for event monitoring as well as control over the fire alarm system installation.

It provides the operator with an intuitive graphical user interface featuring graphical plans with events dynamically displayed on screen to assist in the rapid location of a fire. This allows for improved response time to fire events and other hazards thus reducing risks to life, property or the environment.

In case of a fire alarm, the location of the alarm will instantly appear on the screen. Activation of a live video stream allows verification of the presence of a fire and, if needed, other video streams can be selected directly from the floor plan. When a raging fire has been confirmed, doors can be unlocked, sounders can be activated, elevators can be brought to the ground level, all while verifying the chain of events with the video system connected.

The security manager is in control and able to handle every event. Whenever an alarm is generated, it can immediately be supported by video, which can be retrieved easily at any time. One database for all functions linked to events, where access rights can be altered, is eliminating all chances for error.

Advisor management software

For Advisor Master & Advisor Advanced

Safety | **Security** | Certainty

One system providing different management views:

- Professional view, enabling complete management control over your system
- Visitor view, enabling management of access and presence in the building
- Alarm monitoring view, enabling management of all events and alarms that occur

ATS8600: Advisor management starter edition

- Baseline management level
- Maximum of two devices for each: Intrusion/Access, Video and Fire
- Unlimited clients

ATS8610: Advisor management business edition

- Baseline commercial management level
- Maximum of 25 devices for each: Intrusion/Access, Video and Fire
- Patrol tours & visitor management
- Unlimited clients

ATS8611: upgrade starter to business edition

ATS8690: upgrade for starter edition

ATS8691: upgrade for business edition
